DETAILED ACTION

Claims 1-4 are pending as preliminarily amended 1/7/05

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-3 are rejected under 35 U.S.C. 102(e) as being anticipated by Eades et al (US 6,890,431).

Eades teaches an apparatus for clarification of fluids using floatation and a method of clarifying as claimed. The system comprises a contact zone (30), a separation zone (32), a collection zone (36), inlet port (24), aggregate zone on top of the separation zone, with passage from the contact zone to the aggregate zone (see fig 1 and 4) as seen in figure 1. Figure 4 shows separation zone with immersed membrane 45". Removal device is described in column 2 lines 35-44. The membrane 45" substantially covers the separation zone.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 4 is rejected under 35 U.S.C. 103(a) as being unpatentable over Eades.

Claim 4 differs from the teaching of Eades in the use of permeate water for introducing air to the floatation process. Eades teaches dissolved air floatation, etc – in column 2 lines 26-34. It would be obvious to one of ordinary skill in the art at the time of invention to use the permeate water, which is cleaned water, to make the dissolved air for the floatation process; one would use clean water for dissolving air for the protection of the dissolved air generating equipment.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Krishnan S. Menon whose telephone number is 571-272-1143. The examiner can normally be reached on 8:00-4:30.
